

Deterministic Matcher (SB2) — Component Diagram (C4 level 3)

What ships today, what is built but switched off, and what the v3 reference and the C6 record change — as of 2026-08-12.

SB2 verifies; it does not identify
It only ever compares a pill against the patient's own medications.
Open-set identification across the formulary was measured, and rejected.

The thesis narrowed on 2026-08-12
SB2 no longer re-derives the imprint — the reader does that. SB2 independently REFUSES; that refusal is what it contributes.

None of this is promoted yet
Production SB2/ is content-hash identical to the 2026-08-10 snapshot.
Promotion is a schema migration, not a file copy.

LIVE in production SB2/ today

BUILT - OFF in SB2_Prototype/, default-off, not promoted

STEP 7 specified, not built — see the handoff
